

## IMPROVED CASE FOR PROGRAMMABLE LOGIC CONTROLLER (PLC)

### ABSTRACT OF THE DISCLOSURE

The present invention provides a case having the function of storing a signal line, and more particularly to a case of programmable logic controller having the function of storing a signal line. The case having the function of storing a signal line includes a front panel, a back panel, a lateral panel, and a base. An opening is disposed on anyone panel to store an over-length portion of the signal line for making the electronic device adjacent to the expander.
